

Accelero Bioanalytics Launches GLP Consulting & Training Services

Berlin, February 19, 2016

Accelero Bioanalytics GmbH announces today that additional services in the field of training and consulting have been launched. Under the brand name '**GLPpraxisnah**' customers now can take profit from a unique training opportunity.

The company operates in compliance with the principles of Good Laboratory Practice (GLP). The respective GLP certificate has been awarded by the competent authority on 07 January 2016 after the initial inspection in October 2015. All laboratories are approved for the genetic engineering safety level S2.

At the test facility in Berlin-Adlershof bioanalytical GLP studies for the non-clinical development as well as clinical phase 1-3 studies of advanced therapies are processed according to customer's specifications. Occasionally questions arise out of the daily practice with respect to the quality assurance of such studies, which need to be answered.

The **GLPpraxisnah** training opportunities are suitable for interested researchers, technical personnel, and quality assurance officers working in the chemical and pharmaceutical industry. The seminars especially address GLP knowledge to newcomers who are looking for an overview of the GLP requirements.

The **GLP Basic Course** teaches fundamental Good Laboratory Practice (GLP) knowledge especially for people who need to adapt to these principles. The **GLPtalk** seminar improves additional knowledge in form of dialogues, and may be a forum to intensively discuss particular matters around GLP. The participant's requirement always plays a major role in both seminar types. The **GLP Basic Course** and the **GLPtalk** seminars are also offered as in-house trainings at the customer's facility.

By launching this exceptional service the Accelero Bioanalytics GmbH is the only test facility in Germany who offers GLP training and consulting services e.g. for other GLP test facilities.

With Joachim Hajok the company now has a consultant on board with more than 30 years of practical experience in processing GLP compliant toxicology studies. From 1995 to summer 2011 Mr. Hajok headed the GLP Quality Assurance Unit of the BASF test facility 'Experimental Toxicology and Ecology' in Ludwigshafen, Germany.

Joachim Hajok now is a member of the Accelero Bioanalytics GLP Quality Assurance Unit, and has been watching over the complete GLP certification process by the competent GLP authority.

You will hardly find anybody else with such a practical background, this is **GLPpraxisnah**.

About Accelero Bioanalytics

The company is a privately held contract research organization (CRO) with headquarters in Berlin, Germany. Since October 2015, Accelero's test facility operates in compliance with the OECD principles of Good Laboratory Practice (GLP). Main focus is the marketing of bioanalytical services for research-based pharmaceutical and biotechnology companies. Accelero's team develops and validates custom-made bioanalytical testing methods as requested for the characterization of novel drugs or therapies prior to an authorization procedure.
