

Accelerero Launches EliSpot & FluoroSpot GLP Lab Services

Berlin, 05 February 2018

Accelerero Bioanalytics GmbH is a GLP certified contract research service provider for regulatory drug development, and maintains biosafety level 2 laboratories in compliance with ICH GCP regulations.

The company is pleased to launch the most sensitive immunoassays currently available on the market. The Enzyme-Linked ImmunoSpot (EliSpot) assay monitors cellular immune response upon stimulation with antigens of interest like monoclonal antibodies, oncolytic viruses, drug product formulations, or even living biotherapeutics like human stem cells or bacterial cells.

Accelerero now provides the complete series of routine antibody detection assays (screening, confirmation, neutralization) for primary immunological drug characterization. T-cell or B-cell mediated cytokine secretion can also be detected after isolation from pre-clinical or clinical whole blood samples.

The computerized system can analyse 96-well and 384-well assay plates after standard chromogenic (EliSpot) or 3-colour fluorescence staining (FluoroSpot). The instrument is equipped with a two megapixel camera, and excitation/emission filters for FITC (Alexa488), Cy3, and Cy5 (Alexa647) for parallel staining and detection.

For additional information on our cell-based immunoassays, please feel free to use our contact form, or send us an email to service@accelero-bioanalytics.com. The Accelerero team will be happy to assist you.
